NITmagold Cit 250nm

STORE AT 4°C away from light. DO NOT FREEZE

Description

Magnetic nanoparticles coated with gold add new properties (inertness, protection of the magnetic core against oxidation, optical properties) to those of the magnetic particles, without modifying their superparamagnetic behaviour. Gold shell is coated with citrate anions which can be displaced with a wide range of molecules containing a thiol (SH) group. Once functionalized, they can be employed as platforms for many applications such as target-specific drug delivery, biosensors, lateral flow tests, flow cytometry, cancer photothermal therapy.

Technical Specifications

**Particle Surface:** Citrate anions.  
**Peak SPR wavelength:** 580 ± 5 nm

**Particle Diameter:**^1^ ~250 ± 70 nm  
**Polydispersity index:** 0.2

**O.D.:** 10  
**Solvent:** Milli-Q water

**[Particles]** : 3.4 mg/mL  
**Nº Particles /mL** : ~3.1 x 10^10

The product may contain some uncoated magnetic particles

---

^1^ Histogram SEM image analysis.
Electron microscopy characterization

SEM image

Optical characterization

UV-Vis absorbance spectrum
Size characterization by dynamic light scattering (DLS)

Suggested Application(s)\(^1\)

- Magnetic separation
- Biosensing
- Magnetic hyperthermia
- Drug delivery

Product disclaimer

This nanoparticles product is to be used for research purposes only. Unless stated in the documentation of on an individual product label, catalogue or other information provided to the buyer, IT IS FORBIDDEN TO USE IT for different purposes, including but not limited to them: in vitro diagnostic, use in food, pharmaceutical purposes, medical purposes, or use in cosmetic products, neither for use in humans nor animals, nor for any commercial purposes. Please refer to www.nanoimmunotech.eu for the Material Safety Data Sheet of the product.

The information given in this document is to the best of our knowledge.

\(^1\) Since conditions of use are beyond our control, we do not warranty the suitability of our products.
